

1 Year Observatory Regulator

**Beacham's Clock Co. 300 W. Hood St. Sisters OR 97759
Ph 541-549-9971**

These Calendar clocks were patterned after the E. Howard #23 and have a 1 year running duration per winding of the weights. The calendar functions include, phases of the moon, AM/PM Days of the week, Sunrise/Sunset and a year calendar surrounding the time dial. We have a 4 vial mercury styled pendulum mounted on Invar shaft. The top hood gallery has 3 curved glass panels. The cases are constructed of Tulip Poplar with the following choices of veneer, Oregon Myrtlewood Burl, Chilean Laurel Burl or Brazilian Rosewood. The case dimensions are 62" tall, 20" wide, 13 1/2" deep. We have jeweled the movements using 10 sapphire jewels with olive hole profiles to reduce the friction surfaces. The real advantage of using jewels is to prevent the tarnish on the brass plates from chemically contaminating the oil. Our steel is 416 stainless with high leaded brass for gears and plates. The weights are made of steel with enclosed pulleys. It is our goal that these clocks be the best runners in your collection, and to that end we offer a lifetime warrantee. Thank you for your interest and support.

Sincerely, C.E. Beacham III

Our price is \$12,500
