

Miniature Carved Vienna Regulator

Beacham's Clock Co. 300 W. Hood St. Sisters OR 97759 Ph 541-549-9971

Our latest version of the miniaturized Vienna has been an attempt to give the artistic elements of the skeleton clock with the ease of a readable solid white dial. We call it a hybrid skeleton. We are using .0938" leaded brass for the plates which give them a nice quality look and feel. Our milled pinions and shafts are made from 416 stainless. The pulley has a miniature ball bearing. These little clocks run 8 days on a one pound weight. The cases are constructed from Select Cherry , the veneered backs are Circassian Walnut. Unlike the original Vienna's we prefer beveled glass. We also have provided push button latches, miniature wall stabilizers and our own fancy crank keys. It is our goal that these clocks be the best runners in your collection, and to that end we offer a lifetime warrantee. Thank you for your interest and support for the arts. Sincerely, C.E.Beacham III

Our price is \$2500
